Documents section is fine. We need the data in tabular format (xls) as well

Looks good

Files uploaded to OSC.net.

Eric/Greg- They are uploaded under DOCUMENTS. Is this acceptable? Or would you prefer them under images?

Greg,

Please see the attached files. We are uploading these to the website and are preparing a report on the flight. The CS137 hit that John indicates is significant from a statistical stand point. The location is in the southwest corner of White Rock. There is no hazard associated with the detection.

We were unable to fly the Las Alamos area due to air traffic. In addition, the smoke is

9470467

lofting to 12000 feet. We can fly over the smoke and will make plans to do so if requested. We are working out some IT issues and will be good by morning.

Call me if you have any questions.

(See attached file:

RSI_Survey_20110629_215811_cmb_results_sigma_CS137_Nal.kml) (See attached
file: *RSI_Survey_20110629_215811_contour.kmz*) (See attached file:
RSI_Survey_20110629_215811_cmb_results_sigma_MMGC_Nal.kml)

Mark,
Attached are three KMLs.

1. total count rate contour which show slightly elevated levels associated with the topography.
2. Cs-137sigma plot that show a fairly significant signature in the south end of White Rock
3. Man-made Gamma sigma plot that show no unusually significant rad signature.

I'll be processing this using RadAssist to confirm. Should know more shortly. Still dealing with infrastructure issues (internet, etc.).
